

What Patients are Saying about HELiOS

“ I learned about HELiOS from a friend of mine. Before that, I had to haul around extra oxygen cylinders, which was very difficult. Now it's easier for me to go up and down stairs. I don't have any trouble getting around at all.”

— Jim C., Elgin, IL

“ My wife used to have to help me with everything. I just couldn't do much. I had trouble getting in and out of the car by myself. HELiOS changed all that for me...Whoever invented the HELiOS system deserves a medal.”

— Arlen H., Fort Wayne, IN

“ I switched to HELiOS and now I have freedom. I can go outside and use both hands. I can do anything. I go bowling and I play golf. HELiOS gave me my life back, really.”

— Peg D., New Bern, NC

“ The thing I like most about HELiOS is the mobility. I live at 8,000 feet—and I still snow ski and go off-road motorcycling. HELiOS has allowed me to do all that. Plus I can visit my children and grandchildren without the hindrance of bringing an oxygen tank with me.”

— Paul J., Vail, CO

Choose from two HELiOS Portable Oxygen Units

The HELiOS® Plus

- Weighs just 3.6 lb (1.6 kg) filled
- Only 10.5" (27 cm) tall
- Can be worn with a shoulder strap or belt strap
- No batteries or electricity required
- Low pressure: 22 psi
- Lasts up to 10 hours at a demand flow setting of 2

The HELiOS Marathon™

- Weighs just 5.6 lb (2.5 kg) filled
- Only 15" (38 cm) tall
- Can be worn with a shoulder strap or backpack
- No batteries or electricity required
- Low pressure: 22 psi
- Lasts up to 20 hours at a demand flow setting of 2, and up to 5 hours at a continuous flow setting of 2

Liquid Oxygen Portable

Oxygen therapy doesn't have to slow you down.

We offer a choice of two portable units that last up to 10 or 20 hours*, depending on the model. Both allow hands-free movement and convenience, and both can fill from HELiOS, Companion®, or Liberator® home reservoirs.

If you require supplemental oxygen, you owe it to yourself to ask your physician and homecare provider if the HELiOS Personal Oxygen System is for you.

Ambulate

- Increased physical fitness
- Maximum mobility at home and away
- Clips to belt, backpack or shoulder bag

What is the HELiOS Personal Oxygen System?

HELiOS is a portable liquid oxygen system for patients requiring supplemental oxygen. No other portable system this small and lightweight lasts so long.

What are the benefits of a liquid oxygen system vs. a gas system?

Unlike bulky, heavy gas oxygen cylinders that must be carted around, the HELiOS Portable Oxygen Unit fits into a carrying pouch with a shoulder or belt strap or backpack. There's also less worry about running out of oxygen away from home—the HELiOS portable units typically last up to 10 or 20 hours*, depending on the model.

Liberate

- Streamlined, unobtrusive design to fit any lifestyle
- Greater independence
- Requires no battery or electricity

How can I get a HELiOS system?

If you're already on oxygen, ask your doctor to authorize a prescription change. He or she can probably submit the necessary paperwork directly to your homecare provider who will then schedule a date to deliver the HELiOS equipment to you.

If you do not have a current prescription for oxygen therapy but believe you may need one, call your doctor to set up an evaluation to determine if the HELiOS system is right for you.

Celebrate

- Being adventurous
- Reducing electricity bills
- Enjoying quality of life

Is the HELiOS system covered by insurance?

If you're already on oxygen, check with your health insurance provider to determine your ability to switch to a different type of equipment without affecting your coverage.

If you are not currently on oxygen, your doctor will need to evaluate your condition and determine if a portable oxygen system is medically necessary. If you have a medical necessity, most insurance companies will cover liquid oxygen such as the HELiOS system. Please contact your insurance provider for coverage verification.

Can I travel with the HELiOS system?

Yes. Many homecare providers throughout the U.S. carry the HELiOS system, and they can help ensure that a supply of liquid oxygen is available for filling your HELiOS portable unit as you travel. It is important to note, however, that the HELiOS reservoir is designed as a stationary source of liquid oxygen; it is not intended to be transported in personal vehicles.

*at a demand flow setting of 2
